PROFILE

Python developer and data analyst with 5+ years building automation, pipelines, APIs and internal tools for real operations. I design systems where failures must be visible and results explainable: explicit validation, traceability, automated testing, CI/CD and handoff-ready documentation. My work combines data/software engineering with business, finance and operational context.

PRODUCTION & OPEN-SOURCE PROOF

- **chile-hub**: 22 reproducible, validated Chilean public-data layers; 79 GitHub stars as of Sep 23, 2026.
- **Portfolio Manager Unified**: local-first Electron/React/Fastify/SQLite application with precise financial math and a quality stack spanning node:test, Vitest, Playwright, fast-check and Stryker.
- **Bank Reconciliation**: PyPI-published CLI with deterministic matching, fail-closed behavior and reproducible audit artifacts for each run.

EXPERIENCE

Independent Software Developer · Data & Automation

Feb 2021 - present · Santiago, Chile · current work published under Tooltician.com

- Design and implement Python/SQL automation, ETL/ELT, data extraction and integration, APIs, scraping, reporting workflows and internal tools that reduce manual work and operational error.
- Build quality controls into the system: validation, deterministic outputs where appropriate, automated tests, CI/CD, logging, traceability, explicit assumptions and operational documentation.
- Develop and operate systems across finance, public data, reconciliation, automated publishing and e-commerce, prioritizing maintainability and verifiable proof over demos.

Founder & Developer · Monedario.cl & Noticiencias.com

2025 - present · independently operated production web products

- Monedario.cl: personal-finance platform with calculators, economic indicators, structured data and consistency controls aimed at reproducible results.
- Noticiencias.com: automated acquisition, normalization, source-verification, multilingual processing and publishing pipeline with editorial controls.

Atento Chile / Movistar · Data Analysis & Corporate Accounts

Aug 2019 - Jan 2021 · Santiago, Chile · two roles

- **Branch Tutor / Data Analyst**: extracted and analyzed commercial data to monitor churn, retention, operational performance and business KPIs; produced reports and visualizations for decision support.
- **Corporate Accounts Analyst**: reviewed balances, payments, charges, transactions and discrepancies across large corporate accounts, coordinating case resolution with a focus on accuracy, consistency and traceability.

CARLOS ORTEGA GONZÁLEZ

Python Developer · Automation & Data Systems

[Tooltician.com](#) · [GitHub](#) · [LinkedIn](#)

SELECTED TECHNICAL PROJECTS

[chile-hub](#) · Python · Polars · DuckDB · public data

Reproducible layer for Chilean public data. Automates extraction, normalization, schema/integrity validation, provenance and freshness, then publishes analysis-ready artifacts.

22 buildable layers · Parquet / DuckDB / SQLite / JSON / Excel · 79★ as of Sep 23, 2026

[Portfolio Manager Unified](#) · Electron · React · Fastify · SQLite

Desktop-first, local-first investing workspace. Persistence stays behind a loopback API, financial calculations use decimal.js, and price/benchmark data retains freshness and provider-confidence context.

Automated quality: node:test · Vitest · Playwright · fast-check · Stryker

[Bank Reconciliation](#) · Python · CLI · auditability · finance

Conservative bank reconciliation: ambiguous or low-confidence cases are not auto-matched. Produces deterministic matches, findings and append-only audit artifacts for human review.

Open source · published as bankrecon on PyPI · [PyPI](#)

[DNSpect](#) · FastAPI · React · TypeScript · networking

Local, deterministic DNS resolver benchmarking. Measures latency, failure rate and stability with scoring profiles, encrypted protocols and reproducible exports instead of relying on a remote vantage point.

49-provider catalog · UDP / DoT / DoH / DoQ · CLI + web UI

CORE STACK

Python & data

Python, SQL, Pandas, NumPy, Polars, Pydantic, ETL/ELT, validation, data quality and batch processing.

Backend & automation

FastAPI, Flask, Django, REST APIs, Requests, Selenium, BeautifulSoup, scraping, CLIs and scheduled jobs.

Engineering & quality

Git, GitHub Actions, CI/CD, pytest, Vitest, Playwright, logging, traceability, documentation, Linux and Docker.

Web & storage

JavaScript/TypeScript, React, Vite, Astro, Node.js, PostgreSQL, SQLite, DuckDB, BigQuery, Parquet and JSON.

EDUCATION, LANGUAGES & CERTIFICATIONS

Google Advanced Data Analytics

Professional Certificate · Google · 2023

Google Data Analytics

Professional Certificate · Google · 2022

AWS Machine Learning Foundations

AWS · 2022

Universidad de Carabobo

Law degree · 2004-2009

Industrial Engineering

6 semesters completed · 2001-2004

Languages

Native Spanish · English C2 (CEFR, EF SET)

Technical recognition: AWS DeepRacer 2022 · #63 of 3,161 participants (top 2%)
